✓ Investigation of the copolymerization of unsaturated polyesters and styrene/or methyl methacrylate/by measuring shrinkage. [Dolva Vencse and Etelka Makai (Szerves Vegyipari és Műanyagipari Kutató Int., Budapest, Hung.)

Magyar Tudományos Akad. Kém. Tudományok Osztályának Közleményei 11, 445-53(1959).—The extent of polymerization is detd. by measuring shrinkage in a Schulz dilatometer (cf. Schulz and Harborth, C.A. 41, 5752b). Diethylene glycol maleate and sebacate are copolymerized with styrene (I) and Me methacrylate (II). Unsatu. promote polymerization. The nature of the initiator-activator system (Bz_2O_2) greatly influences the reaction. II had much smaller copolymerization ability with polyesters than I. The Trommsdorf effect (cf. Trommsdorf, et al., C.A. 42, 65705) was valid in the above cases.

Makai, E. On a maximum problem. Acta Math. Acad. Sci. Hungar. 9 (1958), 105-110.

Put $P(z) = \prod_{k=1}^m (1+u_k z)$, $(P(z))^{-1} = \sum_{k=0}^{\infty} b_k z^k$, $h_m(z) = (-1)^{m+1} (1 - P(z) \sum_{k=0}^m b_k z^k)$. The author wants to estimate the maximum K_{mn} of $\int_0^{2\pi} |h_m(e^{i\theta})|^n d\theta$ under the condition that $|u_1| \leq 1, \dots, |u_n| \leq 1$. He shows that the coefficients of the polynomial $h_m(z)$ are symmetrical functions of u_1, \dots, u_n with non-negative coefficients. It follows that the maximal value of the integral is attained if $u_1 = \dots = u_n = 1$. In this case the coefficients of $h_m(z)$ can be evaluated explicitly, and so an elementary expression for K_{mn} can be derived. Some simpler upper and lower bounds for K_{mn} are given.

Makai, E. On the inequality of Mathieu. Publ. Math. Debrecen 5 (1957), 204-205.

Die Ungleichung $\sum_{n=1}^{\infty} 2n/(n^2+x^2) < 1/x^2$ die von E. Mathieu [Traité de physique mathématique, t. VI-VII, partie 2, Gauthier-Villars, Paris, 1890] vermutet, von K. Schröder [Math. Ann. 121 (1949), 247-326; MR 12, 185] und von O. Emersleben [ibid. 125 (1952), 165-171; MR 14, 369] teilweise, von L. Berg [Math. Nachr. 7 (1952), 257-259; MR 14, 731] und von J. G. van der Corput und L. O. Heflinger [Nederl. Akad. Wetensch. Proc. Ser. A. 59 (1956), 15-20; MR 17, 949] mittels mehr schwierigen analytischen Hilfsmitteln vollständig bewiesen wurde, wird hier so einfach gewonnen, dass in diesem Referat der ganze Beweis wiedergegeben werden kann: Es wird die evidente Ungleichung $[(n-\frac{1}{2})^2+x^2-\frac{1}{4}]^{-1} - [(n+\frac{1}{2})^2+x^2-\frac{1}{4}]^{-1} > 2n/(n^2+x^2)$ bezüglich n von 1 bis ∞ summiert. Mit derselben Methode wird auch die anderseitige Abschätzung $\sum_{n=1}^{\infty} 2n/(n^2+x^2) > 1/(x^2+\frac{1}{2})$ bewiesen, die für $x^2 > 5/6$ schlechter, für $x^2 < 5/6$ dagegen besser ist als die untere Abschätzung $\sum_{n=1}^{\infty} 2n/(n^2+x^2) > 1/x^2 - 5/(16x^4)$ von O. Emersleben. J. Aczél (Debrecen).

Makai, E. On a monotonic property of certain sturmliouville functions. Acta Math. Acad. Sci. Hungar. 3, 165-172 (1952) (Russian summary)
 Let x_{vk} , $k=1,2,3,\dots$ denote the non-negative zeros of $J_v(x)$, $v > -1$. R. G. Cooke [J. London Math. Soc. 12, 180-185 (1937)] has proved in a rather lengthy way that

the areas

$$\left| \int_{x_{v,k-1}}^{x_{v,k}} J_v(x) dx \right|$$

are increasing with k . The author presents a surprisingly elegant proof for the case $|v| > 1/2$ using Sturm's comparison theorem in a proper way. The same method is used in order to prove analogous properties of the Hermite and Legendre polynomials.
 G. Szegö (Stanford, Calif.)

3

Lemma 2. *Stability conditions of problem (1).*
 Let us assume that $\lambda_1 > 0$. Then $\lambda_1 \in \sigma(\Delta_{\Omega})$ (Lemma 1 from above). We denote by λ_1 and λ_2 the characteristic values of the differential equation (1) satisfying the boundary condition $u(d)=u'(d)=0$, respectively. According to a classical result (see [1]),

$$\lambda_1 = \lambda_1(n, \mu) = \sqrt{\int_0^1 \mu(x) dx} - 1, \quad n=1,$$

the other eigenvalues in addition to the continuous spectrum have $\lambda < 0$ (the condition is valid if μ is concave from above). Then $\lambda_2 < \lambda_1$. Similarly if $\mu^{(n-1)}(x) > 0$ we have $\lambda_1 < \lambda_2$. Under the same conditions the following inequalities hold:

$$\lambda_1 < ((\mu+1)/n)\lambda_1, \quad \lambda_2 < ((n+1/\mu))\lambda_1.$$

Thus finally all the application bounds for the zero of some polynomials are obtained. *G. Stagg*

TITLE: Function of humidity in the analysis of showers and thunderstorms

SOURCE: Zeitschrift fur meteorologie, v. 18, no. 5-7, 1966, 268-272

TOPIC TAGS: atmospheric humidity, storm, atmospheric phenomenon

ABSTRACT: Thermodynamical, electrical, and cloud-physical factors were related to the incidence of showers and thunderstorms with the aim of establishing the criteria for the development of these meteorological phenomena. An especial significance of atmospheric humidity and of its vertical gradient was indicated and it was shown that this gradient may be correlated to the electric-charge concentration in a vertical direction. Data were presented to illustrate the relationships described. Orig. art. has: 5 figures. [JPRS: 36,844]

PHOTOGRAPH BY
In the article, "Experimental Pharmacotherapy of Hypertonia and Coronary Insufficiency in Simians With Hexonium," A. A. Belous and G. O. Makagyan, of the Sukhumi Medico Biological Station of the Academy of Medical Sciences USSR and the Division of Pharmacology of the Institute of Experimental Medicine of the academy, describe experiments conducted on simians establishing that hexonium, a preparation synthesized at the Division of Pharmacology and identical with the foreign preparation hexamethonium widely used abroad, is a highly effective hypotensive agent. It normalizes blood pressure and has a favorable effect on coronary circulation; normal pressure may be retained for as long as two months after administration of the drug is halted. Electrocardiograms taken of the animals during the period of therapy with hexonium revealed improvement in venous circulation. Hexonium is not effective in coronary insufficiency of long standing.  of Technical Sciences.

PURPOSE: This book is intended for metallurgists concerned with
 the structural metallurgy of alloys.

CONTENTS: This is a collection of specialized studies of various
 problems in structural metallurgy of heat-resistant alloys.
 Some are concerned with theoretical principles, some with de-
 scriptions of new equipment and methods, others with properties
 of specific materials, apparatus, instruments, processes,
 special conditions are studied and reported on. For details,
 see Table of Contents. The articles are accompanied by a num-
 ber of references, both Soviet and non-Soviet.

TITLE: Investigating the effect of stress concentrations near the location of transverse holes and keyways

PERIODICAL: Referativnyy zhurnal, Mashinostroyeniye, no. 20, 1961, 21, abstract 20B93 ("Nauchno. zap. Odessk. politekhn. in-t", 1959, v. 14, 96-103)

TEXT: The authors present the results of investigating the effect of stress concentrations near transverse holes and keyways on the fatigue strength. The tests were carried out on steel specimens. It was found that the coefficient of stress concentration K_f is higher for transverse blind holes with a flat bottom than for through holes or blind holes with a spherical-shaped bottom. A transverse threaded hole increases K_f . The application of relieving notches near the hole, pressing the holes with balls, countersinking of the hole, pressing a bushing into the hole with a lower modulus of elasticity than the shaft material, are measures to reduce K_f . The most effective means is the application of relieving notches by pressing in a punch ($K_f = 1.0$), followed by the pressing of the hole by balls ($K_f = 1.10$). The authors present data

Detali mashin (Machine Elements) 3rd ed., rev. and enl. Kiyev, Mashgiz, 1959.
581 p. 100,000 copies printed.

Reviewer: S.V. Pinegin, Doctor of Technical Sciences, Professor; Resp. Ed.: N. S. Ascherkan, Doctor of Technical Sciences, Professor; Ed.: N.S. Zalomin; Chief Ed. (Southern Division, Mashgiz): V.K. Serdyuk, Engineer.

PURPOSE: This textbook is intended for students of institutions of higher technical education specializing in machinery construction and mechanical engineering.

COVERAGE: This is a textbook for the course, Machine Elements. It is a third edition, revised and enlarged. Design problems and basic theory are emphasized. Machine parts dealt with include joints, transmissions, axles, shafts, bearings, couplings, clutches, springs, and housings. Recently developed designs of machine parts and new methods of calculation have been added. Chapters dealing with material offered in other courses have been abridged or deleted. The authors thank the responsible editor for

The Fatigue Strength of Samples With Cross-sectional (cont.)

the magnitude of $K\sigma$ was slightly decreased. The assumption is voiced that by changing the keyway length, the limit of fatigue would not alter noticeably. In all cases the fatigue failure commenced at the edges of openings or drillings.

TITLE: The Fatigue Strength of Samples With Cross-sectional Openings
and Partial Drillings (Ustalostnaya prochnost' obraztsov s
poperechnymi otverstiyami i zasverlovkami)

PERIODICAL: Nauch. zap. Odessk. politekhn. in-t, 1956, Vol 9, pp 55-60

ABSTRACT: The results of fatigue tests on samples made from normalized steel 6 and steel 40X are reported in the article. The cross-sectional openings and blind drillings were performed with a 3-mm drill bit on steel-6 specimens 15-mm in diameter and with an 8-mm drill bit on steel 40 X specimens 12-mm in diameter. The tests were carried out on a NU machine on the basis of 5×10^6 cycles. It was established that in both of the materials the fatigue limit and the effective stress concentration factor K_{σ} is practically the same for the specimens with openings and those with partial drillings. The tests performed on specimens having five closely spaced drillings equal in depth, did not show any effects of mutual stress alleviation. Increasing the size of the crosspieces between the drillings had an insignificant effect on the fatigue limit;
